Endorsement of the Covid-19 vaccination CVT collaboration

To whom it may concern,

The European Stroke Organisation (ESO) aims at improving stroke care in Europe with a wide range of activities. Stroke research is a core activity, and ESO lends support to academic, multi-national stroke research that is co-ordinated by members of the ESO.

At present, there are multiple uncertainties concerning the clinical epidemiology, mechanisms of disease and management of cerebral venous thrombosis occurring after vaccination against the COVID-19 infection.

The International prospective registry of cerebral venous thrombosis occurring after vaccination against COVID-19 infection that was initiated by the International Cerebral Venous Thrombosis Consortium fulfils the criteria for support by the ESO.

The ESO Executive Committee and the ESO Trials Network Committee strongly endorse this project and support the neurological importance of this new entity. We encourage the members of our organisation to contribute with cases and information on this matter.

Sincerely

Prof Martin Dichgans
ESO President

Prof Robin Lemmens
Chair of the ESO Trials Network
Committee
